

```
1) Admin login
curl -X POST "http://localhost:8080/admin/login" \
  -H "Content-Type: application/json" \
  -d '{"email":"admin@flipfit.com","password":"admin123"}'
2) See pending gym owners
curl "http://localhost:8080/admin/owners/pending"
3) Approve a gym owner
curl -X POST "http://localhost:8080/admin/owners/{ownerId}/approve"
4) See pending gym centers
curl "http://localhost:8080/admin/centers/pending"
5) Approve a gym center
curl -X POST "http://localhost:8080/admin/centers/{centerId}/approve"
```

Below is a ****chronological curl test flow**** for the Dropwizard REST app in
`JEDI-FLIPFIT-NINA-DROPWIZARD-REST`.

Assumes the server is running on `http://localhost:8080`.

Admin Flow (approve owner/center)

1) ****Admin login****

...

```
curl -X POST "http://localhost:8080/admin/login" \
  -H "Content-Type: application/json" \
  -d '{"email":"admin@flipfit.com","password":"admin123"}'
...
```

2) ****See pending gym owners****

...

```
curl "http://localhost:8080/admin/owners/pending"
...
```

3) ****Approve a gym owner****

...

```
curl -X POST "http://localhost:8080/admin/owners/{ownerId}/approve"
...
```

4) ****See pending gym centers****

...

```
curl "http://localhost:8080/admin/centers/pending"
...
```

5) ****Approve a gym center****

...

```
curl -X POST "http://localhost:8080/admin/centers/{centerId}/approve"
```

...

Customer Flow (register → book → cancel)

1) ****Register customer****

...

```
curl -X POST "http://localhost:8080/customers/register" \
```

```
-H "Content-Type: application/json" \
```

```
-d '{"name":"Test
```

```
Customer","email":"testcust@flipfit.com","password":"cust123","phone":"9999999999","city":"Mumbai","address":"Andheri"}'
```

...

2) ****Login customer****

...

```
curl -X POST "http://localhost:8080/customers/login" \
```

```
-H "Content-Type: application/json" \
```

```
-d '{"email":"testcust@flipfit.com","password":"cust123"}'
```

...

3) ****List all approved gym centers****

...

```
curl "http://localhost:8080/customers/centers"
```

...

4) ****View slots for a center (by date)****

...

```
curl "http://localhost:8080/customers/centers/{centerId}/slots?date=2026-02-01"
```

...

5) ****Book a slot****

...

```
curl -X POST "http://localhost:8080/customers/{customerId}/bookings" \
```

```
-H "Content-Type: application/json" \
```

```
-d '{"slotId":{slotId},"slotDate":"2026-02-01"}'
```

...

6) ****Check bookings****

...

```
curl "http://localhost:8080/customers/{customerId}/bookings"  
...
```

7) ****Cancel booking****
...

```
curl -X DELETE "http://localhost:8080/customers/{customerId}/bookings/{bookingId}"  
...
```

8) ****Check bookings again****
...

```
curl "http://localhost:8080/customers/{customerId}/bookings"  
...
```

If you want, I can fill in exact IDs by reading your database and give ready-to-run commands.
